We believe that event-driven architectures will be an integral part of all IT systems in the future. We help companies to create value through event-driven ecosystems. We are a team of real-time data lovers, innovators, and pioneers , and we are looking for a new family member:

Senior Java Software Engineer (80-100%)

What we are and what we do:

- Streaming! A lot of it. Mainly with Kafka, but not only. We're helping companies to move to an event-based world. Namely, ingesting, transforming, and analysing a lot of data.
- Developing backend applications using Java with different frameworks like Spring Boot and Quarkus.
- Beautiful looking frontends, mainly with Angular and Grafana.
- We develop projects in-house, but also directly at our customers' place when needed.
- We're based in Bern, very close to the train station.
- We value teamwork and open communication.
- We speak English in our company meetings.

What you will do:

- You will technically lead project teams, thereby supporting the project lead and the customer.
- You will continuously learn new technologies and frameworks to implement suitable solutions.
- You will design and communicate the software architecture in customer projects.
- You will help our customers in their technical vision and inspire and enable them to find pragmatic solutions.
- You will coach young, motivated software developers in their journey to become seniors.
- You will see the entrepreneurial vision of SPOUD and align your doings accordingly.

What we are looking for:

- You love working together with customers and take responsibility for your and your team's work.
- You are a doer, proactive, and can anticipate technical and organizational issues because you know.
- Strong in software design and architecture.
- 2+ years of relevant experience in software development with Java, Kotlin or other JVM languages and the ability to write clean code.
- Know-how in state-of-the-art development frameworks (i.e. Spring Boot, Quarkus, Micronaut, Vert.x), tools like Docker, git, gradle/maven and methods in your field of expertise.
- You like to work in a startup environment, but feel comfortable also in the enterprise world.
- You are willing to become an expert for Kafka and event-streaming (with our support)
- Beneficial: You have experience with additional programming languages like Python, Typescript or Go and technologies like Kafka, Kafka Streams, Flink, Rx, RabbitMQ
- Professional communication with the customer in writing and speech in German and English.

We offer

- Change! A place where you can make a difference, surrounded by people who value your action and support you on your path.
- A young, dynamic, and non-bureaucratic environment with much flexibility (Yes! We support home office and flexible working hours).
- Open salaries ranging from 80k to 130k per year
- And a few more things. We have a ping-pong table, we play table soccer, and we frequently do BBQs and drink beer together.
